- Child-Class of `nx.DiGraph`
- Every edge has a time-stamp e.g.

`scipy` → `numpy` at $t = 2016-4$

```
class TDiGraph(nx.DiGraph)
```

Class Method: forward

add edges with time-stamp t
set $t = t + 1$

Idea: “Light-Ray” Layout

Idea: “Light-Ray” Layout

- separate nodes based on their degree
- place them each uniformly on a circle/disks distance

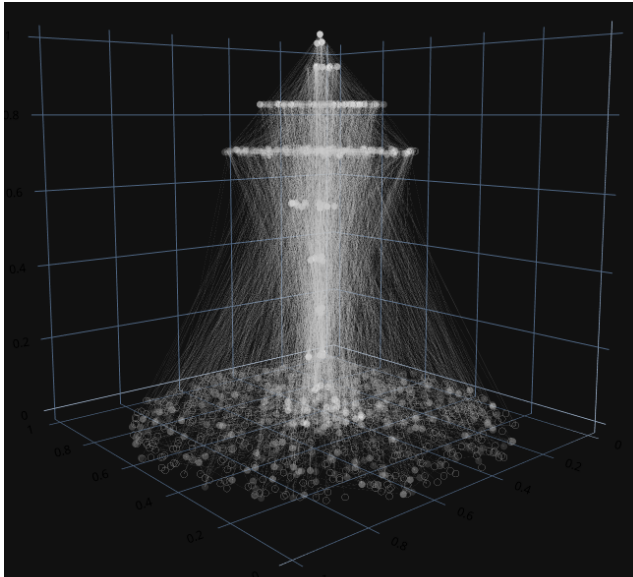

Idea: “Light-Ray” Layout

- separate nodes based on their degree
- place them each uniformly on a circle/disks
- stack the disks, based on a function representing their distance
